International application No.

PCT/AU2003/001458

Box I	Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)
This inter	rnational search report has not been established in respect of certain claims under Article 17(2)(a) for the following
1.	Claims Nos:
	because they relate to subject matter not required to be searched by this Authority, namely:
2.	Claims Nos:
	because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3.	Claims Nos:
	because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a)
Box II	Observations where unity of invention is lacking (Continuation of item 3 of first sheet)
This Inte	rnational Searching Authority found multiple inventions in this international application, as follows:
See 6	extra sheet
1.	As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims
2.	As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3.	As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4.	No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark	on Protest
	No protest accompanied the payment of additional search fees.

International application No.

PCT/AU2003/001458

#### Supplemental Box

(To be used when the space in any of Boxes I to VIII is not sufficient)

#### Continuation of Box No: II

The international application does not comply with the requirements of unity of invention because it does not relate to one invention or to a group of inventions so linked as to form a single general inventive concept. In coming to this conclusion the International Searching Authority has found that there are different inventions.

When all of the claims are considered together, it is not clear what combination of integers defines the invention. This is because different claims have different combinations of integers.

- 1. Claims 11-32, 54 and 56 require resection of the aorta while claims 1-10, 33-53, 55, 57-80 involve extra-aortic counter pulsation. The device of the first group applies compressive force directly on the blood, while the second group defines a device that applies compressive force to a portion of the vessel.
- 2. Claims 48, 50 and 53 define a device that can be used to apply compressive forces on any artery, while some claims are limited to (a) ascending aorta or (b) descending aorta which require different devices due to their location and geometry. This is contrary to the stated objective (see page 2 lines 20-23) of solving the prior art disadvantage.
- 3. The devices of claims 48 and 51-54 restricted by a special geometry on the depression generated or the deflated part of the balloon.
- 4. Some claims, such as claim 40, are restricted to compress only a portion of the circumference, while others devices are not clearly restricted to "only a portion".
- 5. Claim 50 defines a device that can compress a arta substantially without stretching or bunching. While the device of claim 48 causes the artery to flex along a continuous line, which increases in length as the counterpulsation pressure applied to the artery increases.

The above list is not exhaustive. Because of a large number of special technical features and due to different combinations of integers the international application does not relate to one invention or to a single inventive concept.

Information on patent family members

International application No.

PCT/AU2003/001458

This Annex lists the known "A" publication level patent family members relating to the patent documents cited in the above-mentioned international search report. The Australian Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
